AI WEALTH NAVIGATOR

Deployment Guide

Hackathon MVP • React + Vite • AWS

Purpose: Instructions for running, building and deploying the AI Wealth Navigator frontend. The current MVP uses synthetic/demo data and simulated AI responses.

1. Prerequisites

Install Node.js (LTS), npm, Git and a modern browser. An AWS account is required only for cloud deployment.

2. Local Setup

```
git clone <YOUR_GITHUB_REPOSITORY_URL>
cd AI-Wealth-Navigator
npm install
npm run dev
```

Open the localhost URL printed by Vite in the terminal.

3. Production Build

```
npm run build
npm run preview
```

The production files are created in **dist/**. Confirm that **dist/index.html** exists.

4. AWS Deployment

Create an S3 bucket for the React production build and configure CloudFront in front of it for HTTPS delivery.

```
aws s3 sync dist/ s3://<YOUR_BUCKET_NAME> --delete
```

Set the CloudFront default root object to **index.html**. Configure SPA fallback behavior so routes such as /dashboard and /goals resolve to index.html.

5. CI/CD

```
GitHub
  ↓
GitHub Actions
  ↓
npm ci → npm run build
  ↓
AWS S3
  ↓
CloudFront
  ↓
Live Website
```

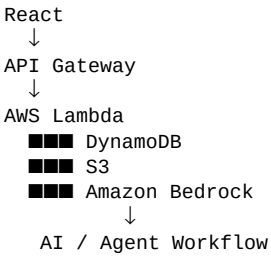
The repository contains the CI/CD workflow as **.github/workflows/deploy.yml** when it is added to the project.

6. GitHub Secrets

Secret	Purpose
AWS_REGION	AWS deployment region
AWS_ACCESS_KEY_ID	AWS deployment identity
AWS_SECRET_ACCESS_KEY	Deployment secret
AWS_S3_BUCKET	Production S3 bucket
AWS_CLOUDFRONT_DISTRIBUTION_ID	Optional CloudFront ID

Never commit credentials or private API keys to GitHub.

7. Target AWS + AI Architecture



This is the target architecture. Do not claim live Bedrock, banking or investment integrations unless they are actually implemented.

8. Verification Checklist

- ■ npm install works
- ■ npm run build succeeds
- ■ dist/index.html exists
- ■ Main routes load
- ■ Responsive UI works
- ■ S3 contains the latest build
- ■ CloudFront serves HTTPS
- ■ No secrets are exposed

9. Troubleshooting

Build fails: check the first npm/Vite error and dependencies.
Route gives 404: configure SPA fallback to index.html.
Old version appears: invalidate CloudFront cache.
AWS upload fails: verify bucket, region, secrets and IAM permissions.

10. Responsible AI / Data Note

The hackathon uses synthetic financial data and simulated AI responses. Scenario results are illustrative, not guaranteed financial outcomes. The platform is designed for decision support and does not automatically execute financial transactions.
